

The basic workflow to move one ec2 instance from one region to another region we have to create snapshot of the region1 instance and create an AMI image of that instance in that region and copy that AMI image in that region2 where we want to move that instance and from that copy image, we can again launch that instance in region2.

1)Go to the instance of Mumbai and select that instance.

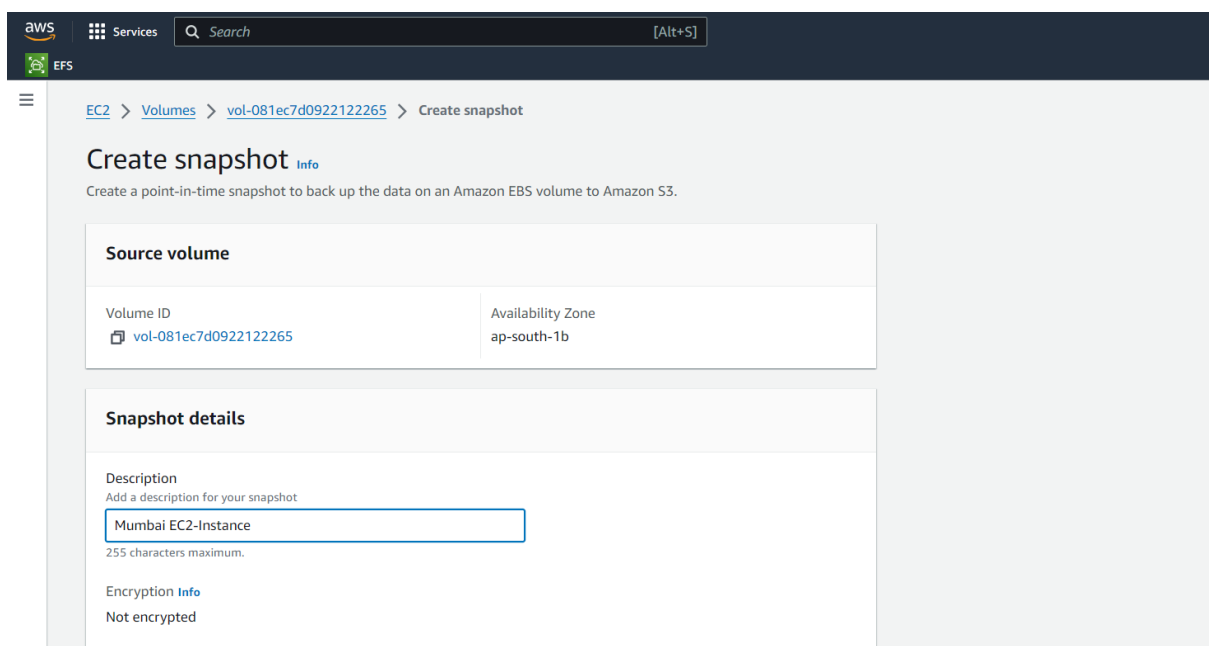

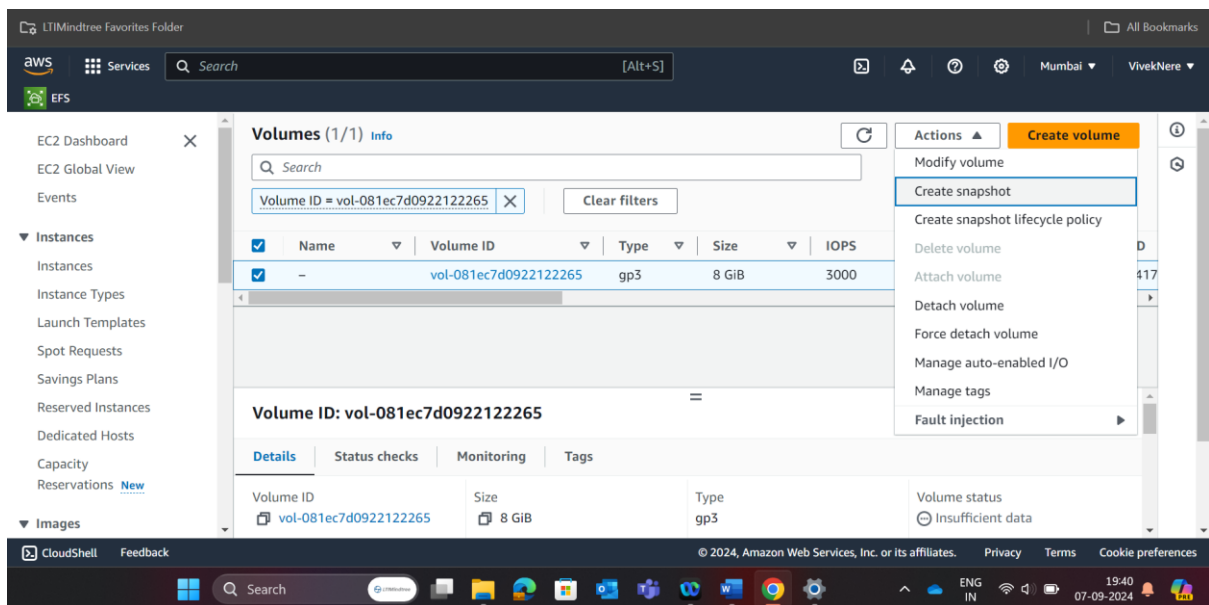

2) Go to the storage of that instance and click on the volume ID

3)select that volume then go to the action and select create snapshot option

Tags Info

A tag is a label that you assign to an AWS resource. Each tag consists of a key and an optional value. You can use tags to search and filter your resources or track your AWS costs.

No tags associated with the resource.

Add tag

You can add 50 more tags.

Cancel

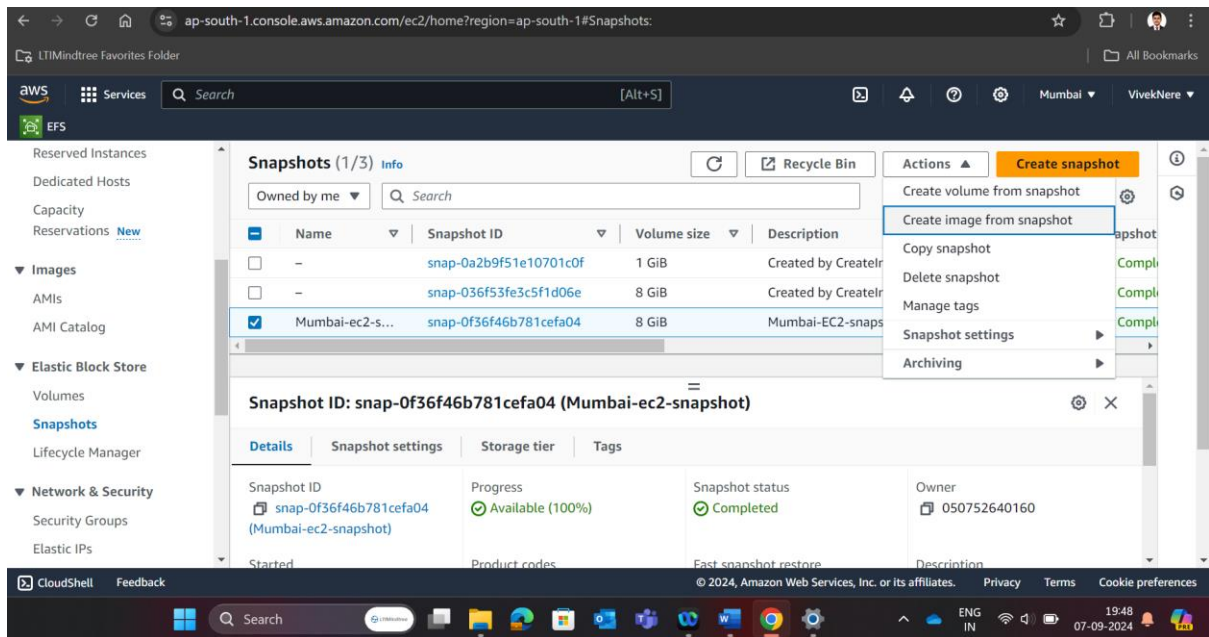

Create snapshot

4)Then Go to the Elastic Block storage then click on Snapshots then select that snapshot and give name to that snapshot.

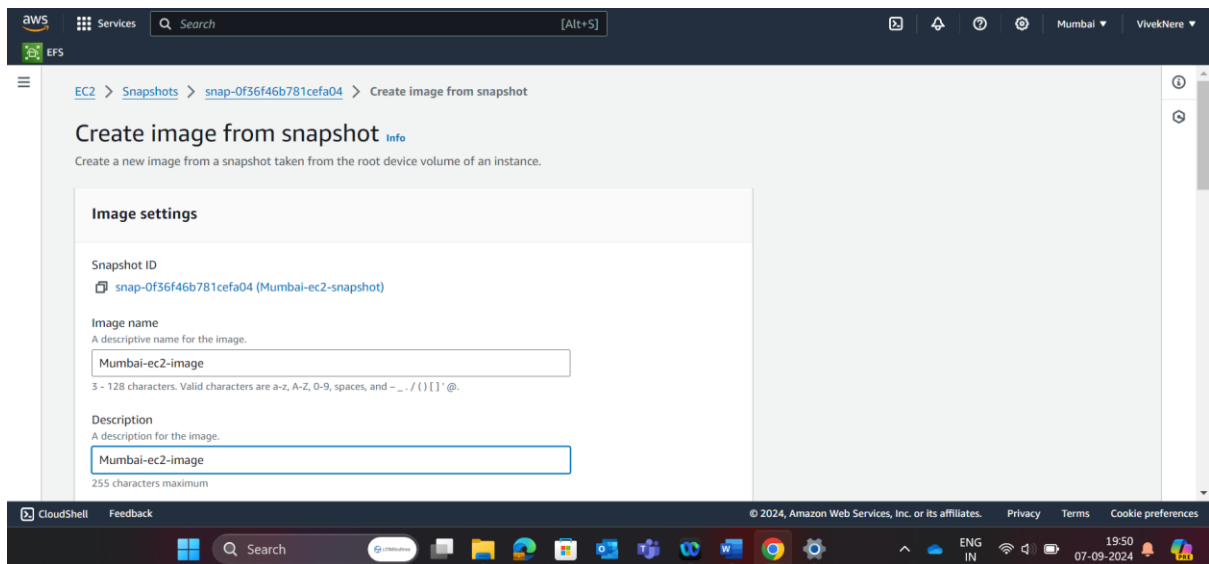

The screenshot shows the AWS Management Console interface. On the left sidebar, the 'Elastic Block Store' section is expanded, and 'Snapshots' is selected. The main panel displays a table of snapshots. One snapshot, 'Mumbai-EC2-snapshot', is selected, and an 'Edit Name' modal dialog is open, showing the name 'Mumbai-ec2-snapshot' in a text input field. Below the table, the 'Details' tab for the selected snapshot is visible, showing its ID, progress (Unavailable), status (Pending), and owner.

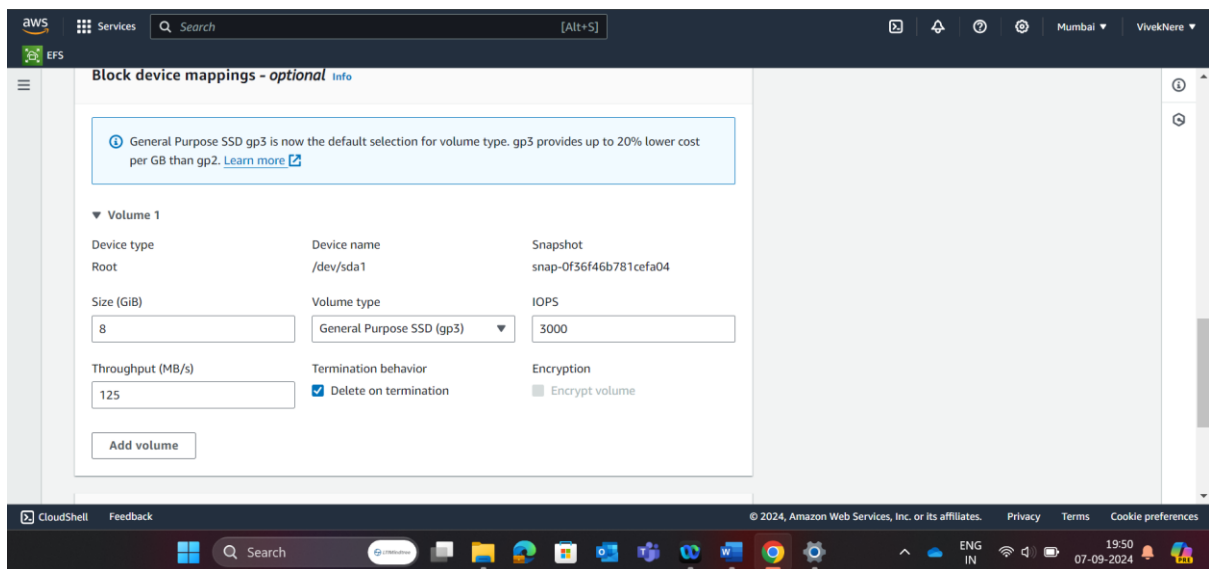

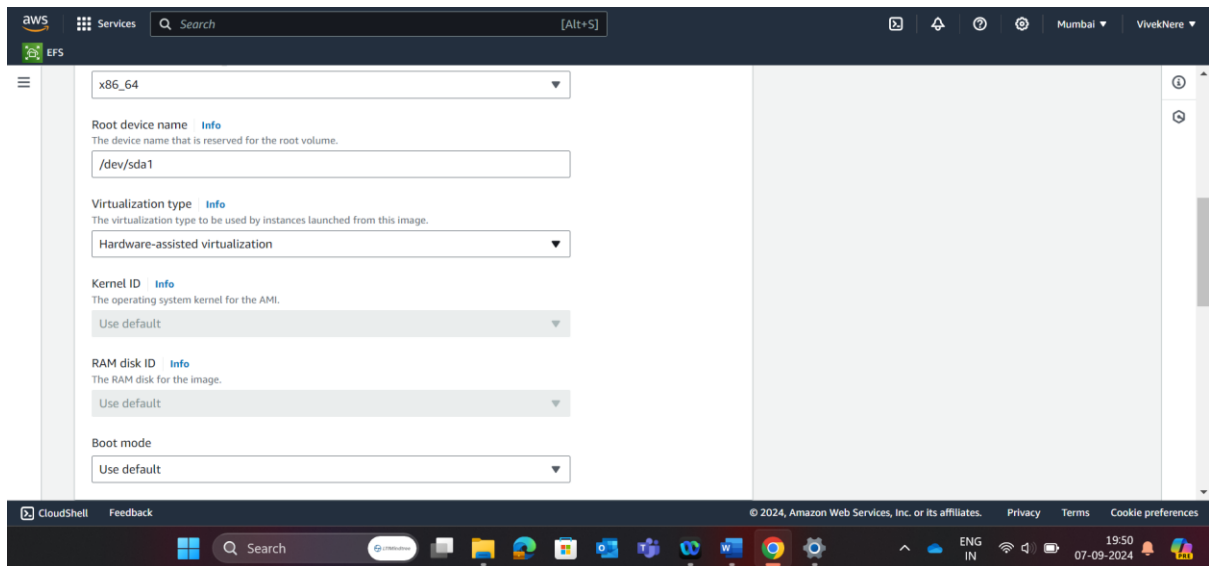

Name	Snapshot ID	Volume size	Description	Storage tier	Snapshot status
-	snap-0a2b9f51e10701c0f	1 GiB	Created by CreateImage(i-...)	Standard	Completed
-	snap-036f53fe3c5f1d06e	8 GiB	Created by CreateImage(i-...)	Standard	Completed
Mumbai-EC2-snapshot	snap-0f36f46b781cefa04	8 GiB	Mumbai-EC2-snapshot	Standard	Pending

5)Now we need to create an AMI image of that instance from that snapshot so select that snapshot then click on 'action' then click on 'create image from snapshot'

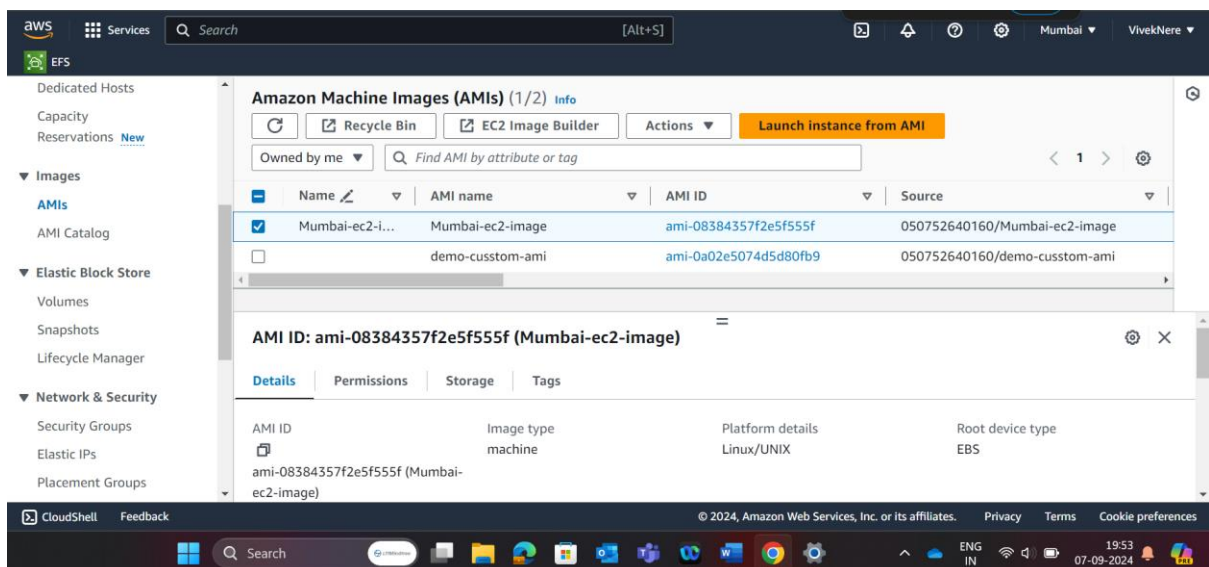

6) Give name and description to that image and create that image

7) Now click on 'images' then click on 'AMI' to see whether image get created or not

8) Now we want to copy that AMI in Singapore region so, click on that AMI then click on action then click on Copy AMI and then we need to select a region where we want to copy that AMI.

The screenshot displays the AWS Management Console's 'Copy AMI' wizard. The interface is in the 'Mumbai' region, as indicated by the top navigation bar. The wizard is titled 'Copy AMI' and provides instructions to 'Create a copy of an Amazon Machine Image in a Region.'

Step 1: Copy Amazon Machine Image (AMI)

- Original AMI ID:** ami-08384357f2e5f555f (Mumbai-ec2-image)
- AMI copy name:** Mumbai-ec2-image
- AMI copy description:** [Copied ami-08384357f2e5f555f (Mumbai-ec2-image) from ap-south-1] Mumbai-ec2-image
- Destination Region:** Asia Pacific (Singapore)

Step 2: Destination Region

A copy of the original AMI will be created in the destination Region.

☐ Copy tags
Includes your user-defined AMI tags when copying the AMI.

☐ Encrypt EBS snapshots of AMI copy
Encrypts all snapshots in the AMI copy with the same key.

Tags - optional
A tag is a label that you assign to an AWS resource. Each tag consists of a key and an optional value. You can use tags to search and filter your resources or track your AWS costs.

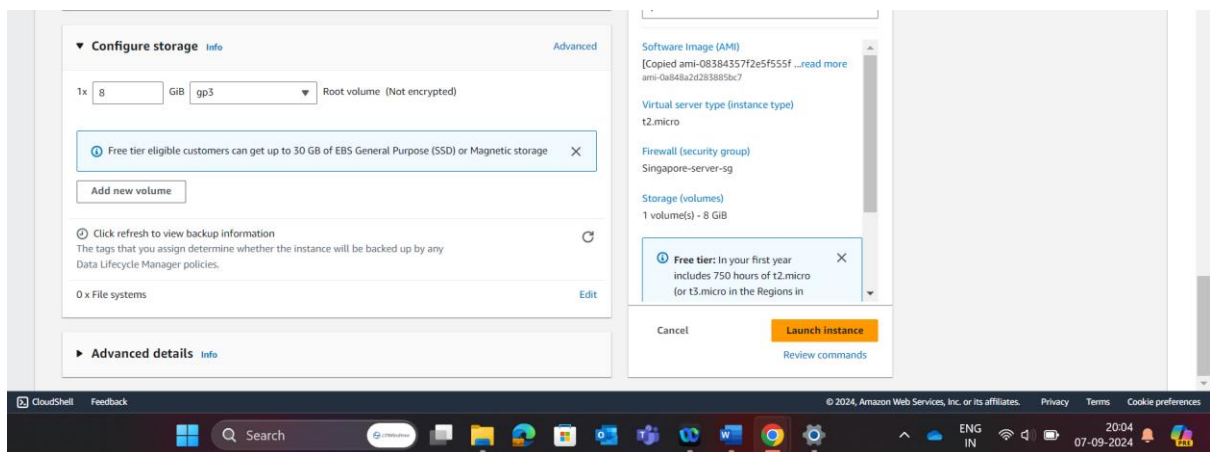

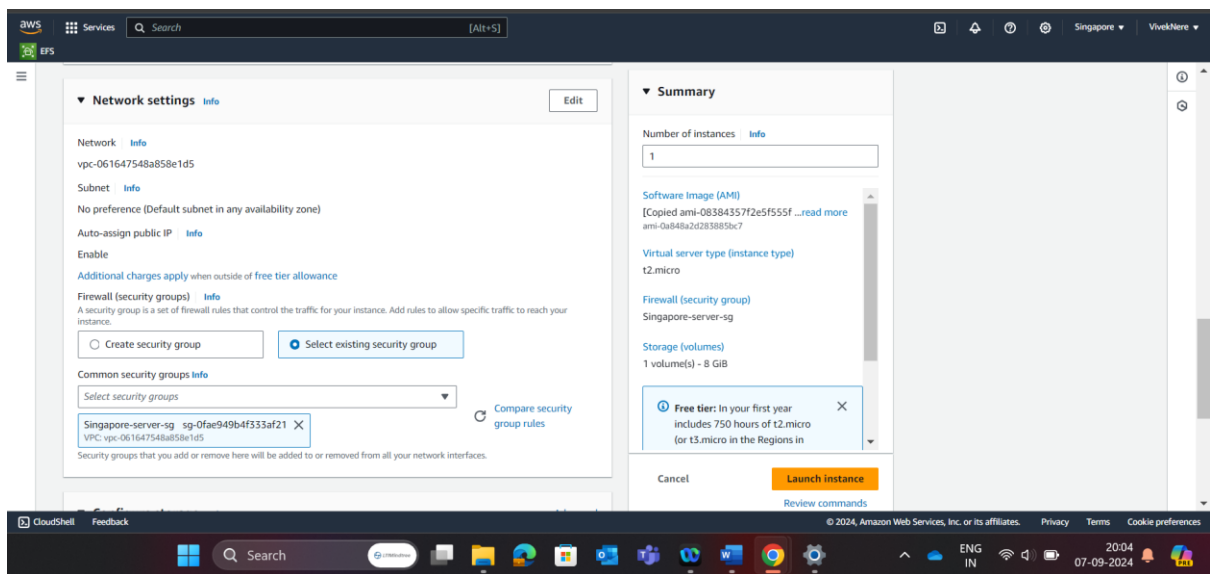

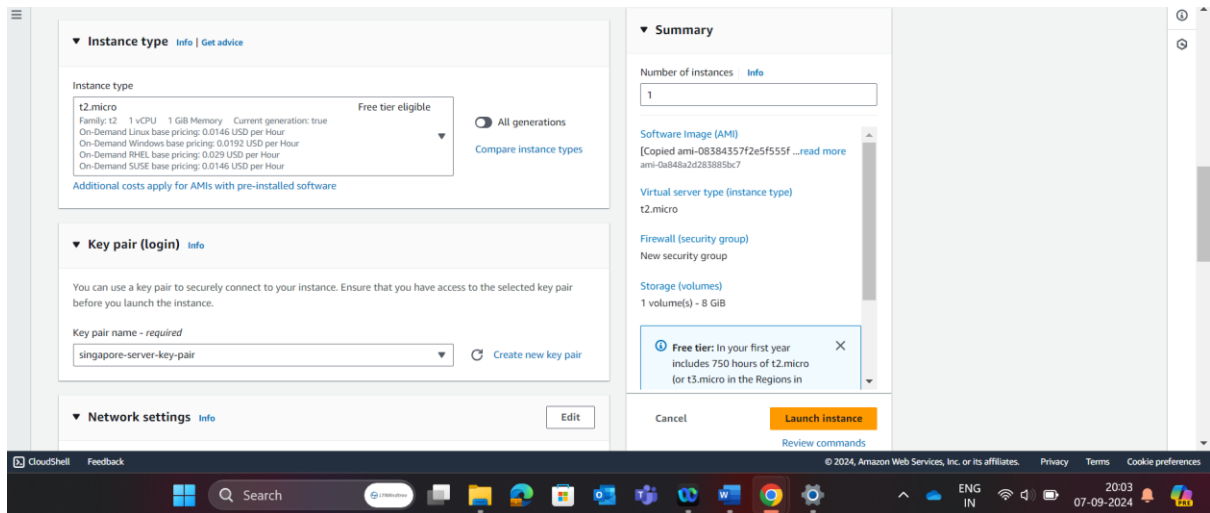

☒ Tag image and snapshots together
Tag the image and the snapshots with the same tag.

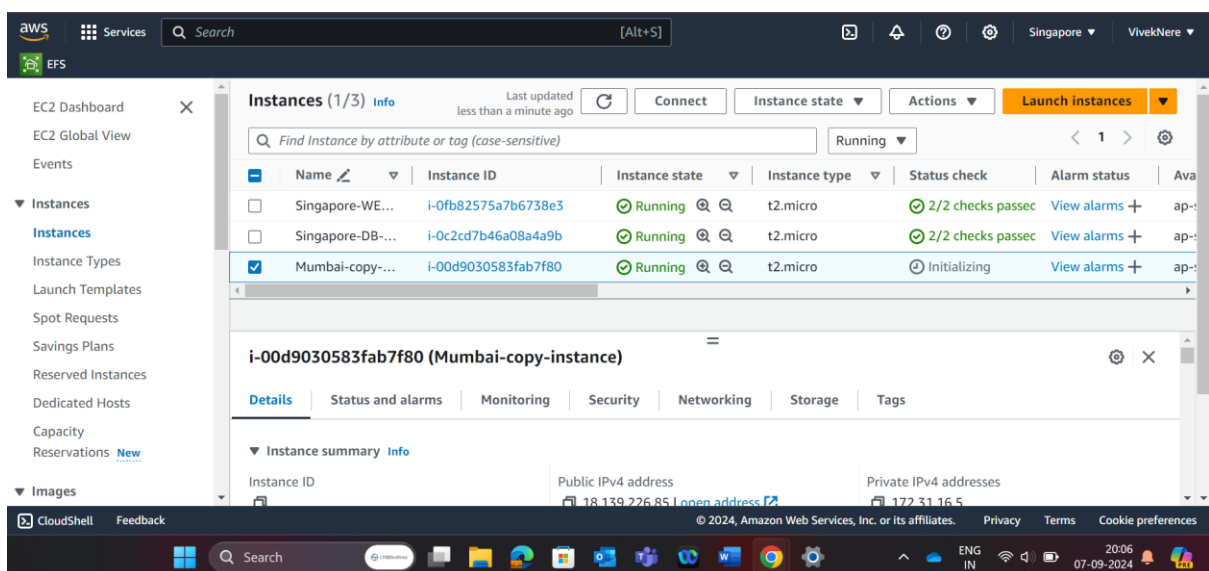

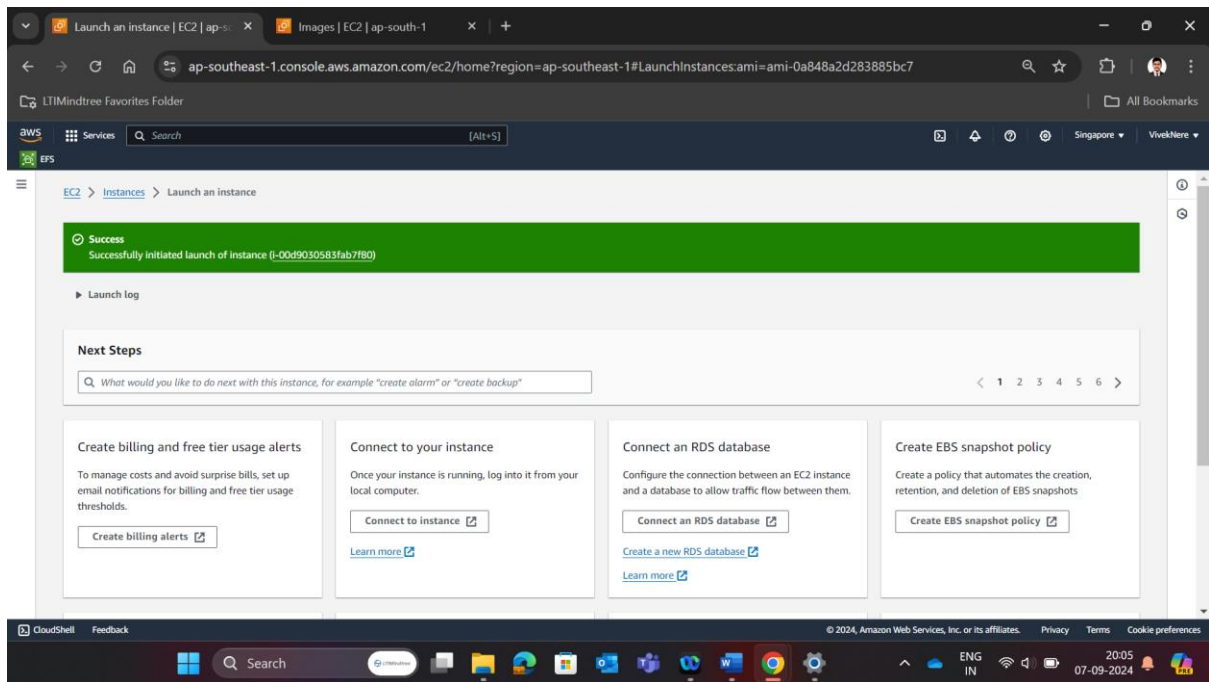

☐ Tag image and snapshots separately
Tag the image and the snapshots with different tags.

No tags associated with the resource.

You can add up to 50 more tags.

9) Now switch to the Singapore region and go to the AMI select that AMI and rename it then click on Launch instance from AMI then give name to that instance give key-pair and security group and launch that instance.

Here we have successfully created Mumbai ec2 instance copy in Singapore!
